

WESTCO FILTERS

Liquid Filter Solutions since 1982

Filter Presses

Westco is the best choice for filter presses for all your industrial dewatering and process needs.

We offer a broad array of filter press sizes to meet your needs. From 250mm/0.4 cuft [11L] all the way to 2000mm/600 cuft [17000L], our selection provides the right size press for your specific project. We also carry a wide selection of filter press parts and accessories like plate shifters, hydraulic systems, piping and manifolds, self-dumping cake hoppers, and more.

In addition to manufacturing filter presses and parts in-house, we also take great pride in our ability to rebuild pre-owned equipment. Our talented team has experience with top brands in the industry including Siemens, US Filter, JWI, Lanco, Perrin, Edwards & Jones, Pac Press, and others. We can repair or rebuild your current equipment and advise you on additional products to make your system run as smoothly as possible.

Our equipment is used in a number of different industrial applications. Anywhere a company needs to separate solids from water or other liquid, we can help. Car and truck washes can use our presses to filter wastewater for reuse, Industrial laundries can share the same benefit as lint, sand and grit, emulsified oils and greases, and many other unwanted wastes are filtered out of water, which can then often be reused.

If solids are generated during the treatment of industrial water use or wastewater, our filter presses are an ideal solution. For example, when lime is used to soften water, the solids generated must be removed afterwards. Our process dewateres the lime slurry, and the leftover dried lime can be used for a variety of purposes, including soil augmentation
