Liquid Filter Solutions since 1982

## PBE Series Pleated Filter Bags

### PBE Series Pleated Filter Bag Elements

*Nominal and High Efficiency pleated bag filter elements provide up to 12 times more dirt holding capacity than standard bags*

**Westco Filters** new **PBE Series** pleated bag elements offer the best of both worlds – combining bag and cartridge filtration into one simple to use, long lasting element. Similar to bags, our Pleated Bag Elements (PBE Series) filter from the inside out – keeping the contaminant “trapped” on the inside – making it easy to handle. Like cartridges, the unique pleating combined with our supported pleat technology, provides significantly more surface area – meaning greater dirt holding and long service life. Our PBE Series is perfect for application which require frequent filter changes.

**Westco’s PBE Series** elements are manufactured using up to 12-24 sq. ft. (Size 2) and 12-15 sq. ft. (Size 1) of filter media – our unique pleating technology strengthens the filter matrix – ensuring overall integrity, high efficiency and high loading. All seams are ultrasonically welded to prevent pass through. NEW Size 4 PBE elements are also available in all micron ratings

### FEATURES

- Micron ratings available from 1 to 800 microns up to 95% efficiency
- PBE elements are available in most industry standard 1, 2 and 4 bag sizes
- Offer low clean differential pressure drop
- Monofilament nylon and Stainless Steel mesh media are also available
- Maximum surface area: 12 to 24 sq. ft. per element
- High Efficiency polypropylene and polyester micro-fiber media - POMF / PEMF
- Extended service life - FEWER CHANGE OUTS - Saves MONEY \$\$\$
